

Round table proposal: “Basics of geological risk evaluation”

Leaders: Sergeev D.O., Isayev V.S., Chesnokova I.V., Kozyreva E.A., Baraboshkina T.A.

The main objective of the proposed round table is to discuss the modern approaches to geological risk assessing for a decision support purposes.

The risk assessment procedure includes different kinds of basic information. The most complicated part is linked with regular observations, which provide data about geological processes natural regime.

The Crimea case study is focused on the maintenance of infrastructure and the protection of the coastal strip from destruction. Methods and actual possibilities of geological monitoring continuation are the subject of proposed round table.
